E-Shop

The theme of the project is the development of an online store for the sale of specialized goods (phones). The main technology used to develop the system was Spring boot technology.

FUNCTIONALITY/FEATURES:

- User register/login with role based authorization.
- Admin portal for CRUD operations on products (only accessible by admin user).
- Store: display all products, filter products by price, category, size or brand, order results by different criteria or filter by search input.
- Purchasing: view details of product, add to shopping cart, checkout, place order with shipping address and payment info.
- Create and edit user profile, view orders history.
- Responsive design.
